1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-21, 26 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pham in view of Jensen et al. Pham discloses most of the elements of the claims including a stress buffer pattern formed by grooves such as grooves 32 in regions including the center and edge of a pad. Pham may not disclose trenches on the top surface of the polishing region. On the other hand Jensen is cited to show a desirability to provide trenches on a top surface and in a polishing region of a polishing pad. It would have been obvious in view of Jensen to provide trenches as claimed in Pham for the purpose of enhancing performance of the polishing device of Pham.

3. The claims are objected to because it is not clear which of the two regions is referred to by the phrase "and the region" on line 3 of claim 1 and line 4 of claim 11. Clarification is required.
